Quick NoteBook

Notebook Flask Application

Problem Statement

Working in an digital environment becomes challenging whenever you have many things to do. Having lots of things pending often makes one to forget some of the items to work on hence some work are left undone or not done in the best manner.

Solution

Create a web Flask application that provides a platform for saving notes of things to do at a particular time, resources to check on or research at, things to remember and general notes one wants to have them recorded for future reference.

Minimal Viable Product(MVP)

- User Authentication(Sign up & Sign in)
- Notes Categories i.e -things to do, things to remember,resources to check on or research at and general notes
- Add new Note
- Delete a note
